Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leach in view of Pettibone. Leach teaches an oven having two upper heating elements 68,92 and a lower heating element 82 as claimed. Leach does not teach the programmable controller which permits menu programming as claimed. The controller in Leach comprises selector units manually set. The patent to Pettibone et al is applied for teaching that an oven with multiple upper and lower heating elements can be programmer controlled via control panel 136 for different recipes and use of the same leads to a more versatile cooker. In view of this teaching it would have been obvious to modify the Leach system with a more state of the art controller such as set forth in Pettibone, to attain the benefit of more versatility in cooking of different products and recipes. Note that different combinations of heating elements would be controlled by such modification. Also note that figure 2 in Leach teaches different combinations of heating elements. As per claim 2 note that Leach teaches a high temperature cutout as claimed. See column 4 lines 32 to 72. AS per claim 3 note that the further default menu called for could merely comprise a keep warm cycle which is conventional and standard in many cooking devices.

Art Unit: 3742

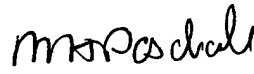

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. White and Hamstra are cited for disclosing heating controllers for ovens.
